OUR VISUAL STYLE GUIDE

05 Our Visual Identity

Horizontal Logo

Stacked Logo

Our Primary Logo is the main logo associated with our ministry and should be used most often, whenever possible. The primary logo can be used in either a stacked or horizontal orientation. Legibility is an important part of building brand trust, and because of that the horizontal logo should never appear smaller than 1.15” and the stacked logo should never appear smaller than 1.”

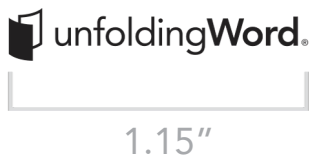

05 Our Visual Identity: One-Color Alternates

Horizontal Logo

Stacked Logo

Because our primary logo includes a gradient and overlapped colors in the icon, it doesn't translate well to one color. In cases where the logo can only appear in one color use the one-color logo that has been specially designed for such use. The one-color logo should only ever appear in black, white, or the primary brand color.

05 Our Visual Identity: Color Variations

It's important to make sure our logo always looks great and has good contrast anytime it appears somewhere. Our brand library contains full color, one-color, and reversed versions of the logo. Below you'll find examples of each color way and how to use it. White and reversed logos are best suited for appearing against darker colors, while the full color version of the logo may appear against lighter colors.

05 Our Visual Identity: Our Simplified Wordmark

The wordmark without the brand mark should not be used on it's own as a complete representation of the brand. It may be used in instances in which the brand mark appears elsewhere in the context.

05 Our Visual Identity: Our Icon

Icon – Full Color

Icon One-Color – Black

Icon One-Color – White

This final type of logo is the most simplified, compact mark of the logo family. Brand marks are handy to use as favicons, social media profile pictures, watermarks on images, website footers, print collateral, etc.

Our brand palette is carefully curated to represent our business. When using the brand colors, refer to the appropriate color codes below to make sure they appear accurately depending on the space. The RGB color space codes and HEX codes may be used when the colors are being used in a digital environment. The CYMK color space codes and the PANTONE colors can be used when the colors are going to be printed. NOTE: The primary brand color is marked with an asterisk.

Typography is such an important part of our brand recognition and plays a big role in communicating our brand’s personality at first glance. The following fonts have been carefully selected to represent our brand goals and should be used throughout our brand, both online and in the real world.

Lorem ipsum dolor sit amet, consectetur adipiscing elit.

INTEGER POSUERE ERAT A ANTE VENENATIS DAPIBUS.

Vestibulum id ligula porta felis euismod semper. Nullam id dolor id nibh ultricies vehicula ut id elit. Cras justo odio, dapibus ac facilisis in, egestas eget quam. Cras mattis consectetur purus sit amet fermentum. Cras justo odio, dapibus ac facilisis in, egestas eget quam. Vivamus sagittis lacus vel augue laoreet rutrum faucibus dolor auctor. Nulla vitae elit libero, a Ximin

Hierarchy is important for easy readability and helps make our content more digestible for our audience. When creating blocks of content, pay attention to the hierarchy pattern and use the following example as a guideline to keep good visual contrast within the text. We use a heavy weight of Avenir as our headlines. For body copy, the sans-serif design of Avenir makes it more legible in digital environments, while PT Serif works better for printed formats.

05 Our Visual Identity: Photography

Here are some examples of our brand photography style. Images are processed much faster than text, therefore it's important our brand imagery stay consistent and recognizable to support our brand goals. Our photography is characterized by true-to-tone photos of places around the world, people in their native villages, and gatherings of people together around a digital device. We select photos in which the people look natural and not overly posed, as well as avoid photos that are overly stylized or filtered. Generally we opt for images of people who look happy and hope-filled, rather than suffering.

05 Our Visual Identity: Angles + Opacity Layers

We want to create a brand with depth and one way to do that visually is with layers. Using angled blocks of colors creates a dynamic visual and brings a lot of energy to our brand designs. Layering the colors over photos and lowering the opacity (the examples here use an opacity of 70%) creates a layered effect that adds depth and dimension to the brand. Either the brand colors or brand gradients can be used to achieve this effect. When using angles, be sure to keep the angles consistent throughout the design.
